

Objective:

You're required to choose an idea for your web programming project. The objective of our web programming project is to develop a comprehensive management system that goes beyond a simple CRUD application.

Project Rules:

1. Each group will consist of a maximum of 2-3 members, solo groups will not be allowed.
2. Project ideas must be unique for each group, the same idea will not be accepted twice.
3. Every group must create a Github repository for their web project.
4. All group members should be added as contributors to the repository.

Submission Requirements:

You are required to submit two items:

1. A Word file containing your project proposal, including all necessary functional requirements for both the admin and user modules.
2. The Github repository link of your web project.(Add all group members as contributors in repo)
One submission per group!

Attached to this task, you will find a sample proposal (You can edit the same document as well) and the repository for reference, which will provide you with insights into the level of complexity your project should aim for.
